PULVERIZER

The Creekview LP Series pulverizers are designed to help eliminate the cakes or crust in poultry barns. They are also a great tool to save litter by breaking up the cakes to help dry out litter without the need to take the cakes out of the poultry barn, therefore saving time and money. They are also a great tool to level litter for your next flock.

SETTING UP THE PULVERIZER

Attach 3 point arms to pins then attach drive line to tractor PTO. Set on level spot and adjust top link to where machine is slightly tilted up in front.

MAINTENANCE

Each machine is inspected and fluids topped off before shipment. Grease all 5 zerks after each use or after wash-down. Or grease every 10 hours of use. 2 pumps only!

1 zerk at each end of pulverizer rotor

1 zerk at input shaft on chain box

1 zerk on each end of PTO shaft

Check fluid level once before every use.

Chain box hydraulic oil

Gearbox 80 weight oil

OPERATION

When pulverizing, drop pulverizer to desired depth. Always lift pulverizer at end of house. Do not turn with pulverizer down in litter. Always throttle tractor down before raising machine. For best performance drive 1-2 mph.

WARNINGS & SAFETY

Always make sure nobody is within 25' of tractor or pulverizer before engaging PTO and during operation of machine.

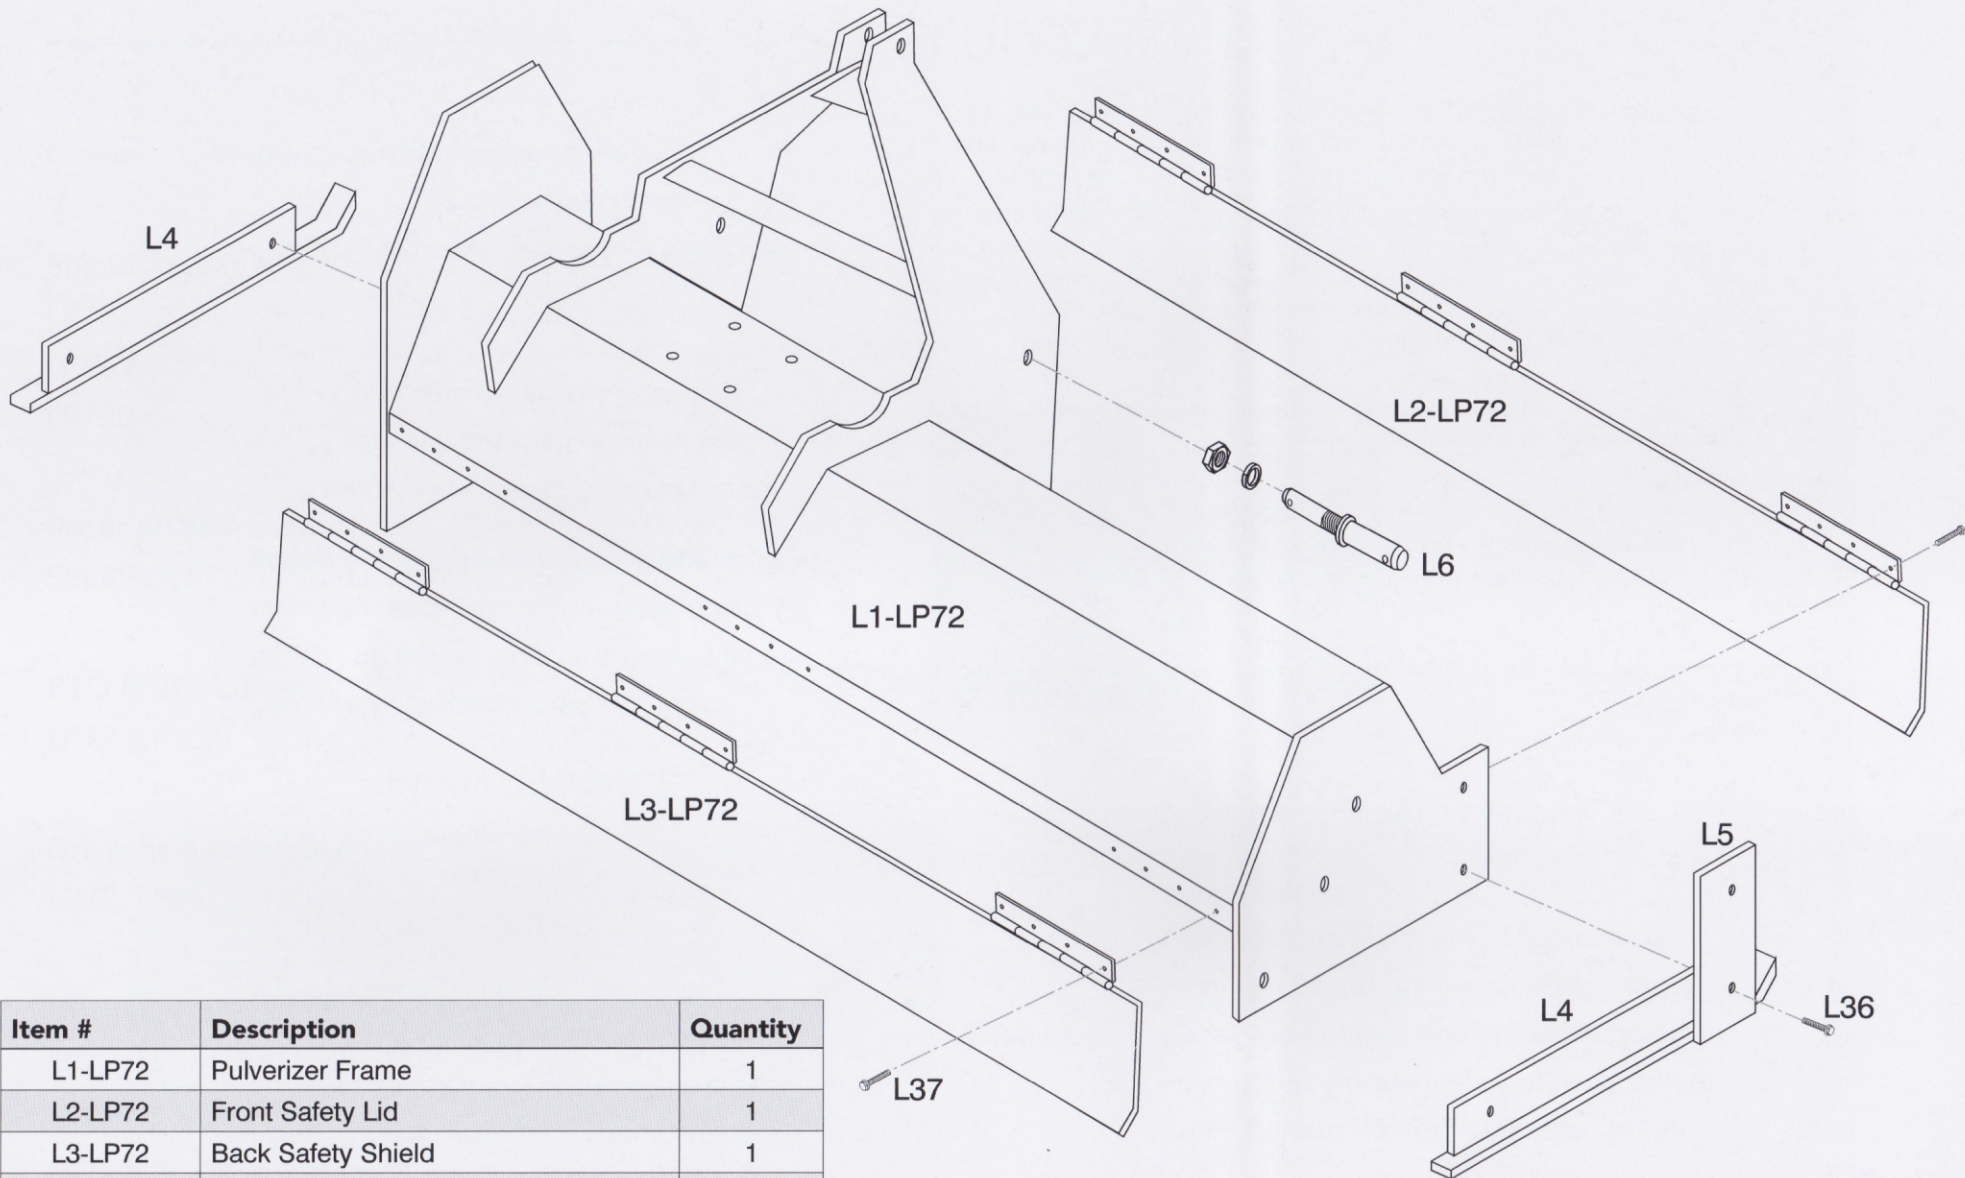

Always have pulverizer sitting on ground and tractor shut off before servicing or washing.

Always have all safety shields on machine closed before engaging PTO.

Always secure PTO safety chain before operating machine.
